

W.A.R.N. NetFlash Desktop Pop-Up Alerting uses your most basic daily tools - your local network and existing PC or Enterprise IT system - for instant, pervasive emergency and employee alerts and response.

W.A.R.N. NetFlash turns your entire network into an alerting system with:

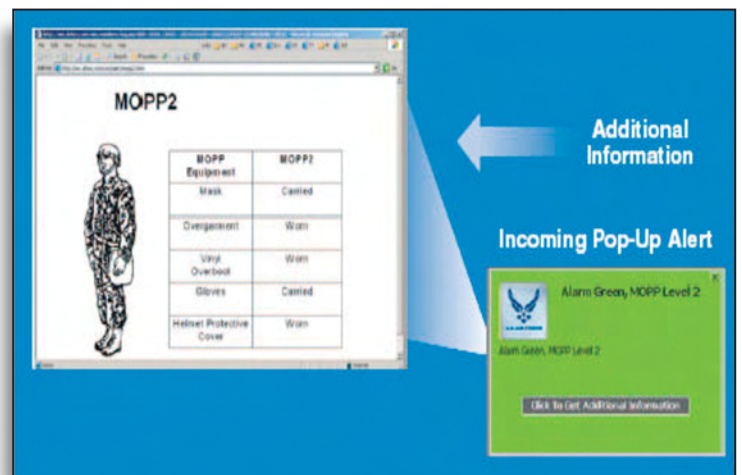

1. On-screen pop-ups that must be clicked and acknowledged.
2. Interactive message delivery to each Blackberry, pager, cell or mobile phone, email, or other text device throughout the department or agency.
3. Instant alert creation or selection from pre-built templates, colors and sounds based on severity.
4. Uses your networked-based messaging capabilities to reach all targeted personnel in a timely manner.

W.A.R.N. NetFlash uses the same network technology that serves the US Army (Fort Riley, KS, system wide); the US Navy (Naval Station, Norfolk VA), and US StratCom (US Strategic Command, Omaha, NE).

As part of a total solution for the Department of Homeland Security and Emergency Management agencies at the state or regional level, W.A.R.N. NetFlash creates a network-centric instant alerting protocol by and between all connected agencies for secure immediate no-cost alerting in cities or communities throughout the state or region.

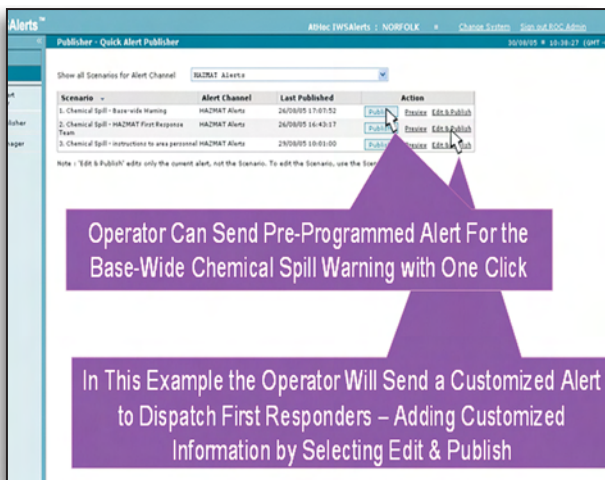

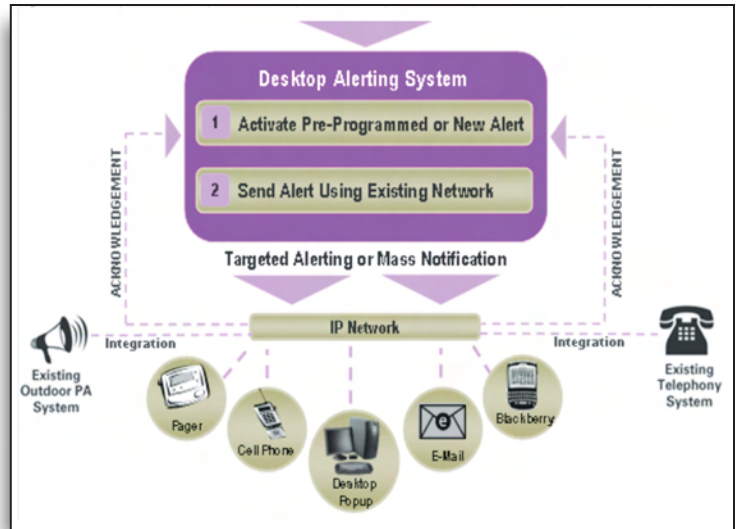

Assuring response to alerts is just as important as delivering them. W.A.R.N. NetFlash enables modification to the look-and-feel of each alert -- to signify different content type or priority --which then can be matched to the appropriate audio-visual effect for the level of alert or event.

A pre-built library of military post and building or facility command response alerts helps cut set-up time and implementation. Custom templates or all-new alerts - based on your specific organization or agency needs and protocols - can be created for you by our W.A.R.N. Support Group.

W.A.R.N. NetFlash, Desktop Alerting technology that is changing how buildings, military bases, campuses and connected networks are notified.

During emergencies, it is critical to quickly and accurately notify all personnel of threats and to give instructions to assure their safety and ability to respond. From terrorist threats to approaching tornados, you must be able to instantly reach a mass network-connected audience, and targeted individuals, whether they are outdoors or in sound-proof buildings or bunkers. This requires using all your existing assets -- siren poles, wiring and phone exchanges, and most importantly, your network – one of the most pervasive local assets. Effective emergency mass notification is not only essential for ensuring dangerous situations are dealt with properly and personnel are kept safe, but is also necessary for compliance with mandates like Full Spectrum Threat Response (FSTR). Instant instructions can be distributed on mobile devices (as shown at right) with acknowledgement and escalation if necessary.

Easy to use, programmable, and ready 24/7 for any full network and connected device alerting and response.

W.A.R.N. NetFlash coordinates with our entire suite of rapid phone and device calling, GIS mapping, Continuity and Weather services.
